

Solutions Overview Guide

Meeting Room Solution: Q-SYS RoomSuite Modular System

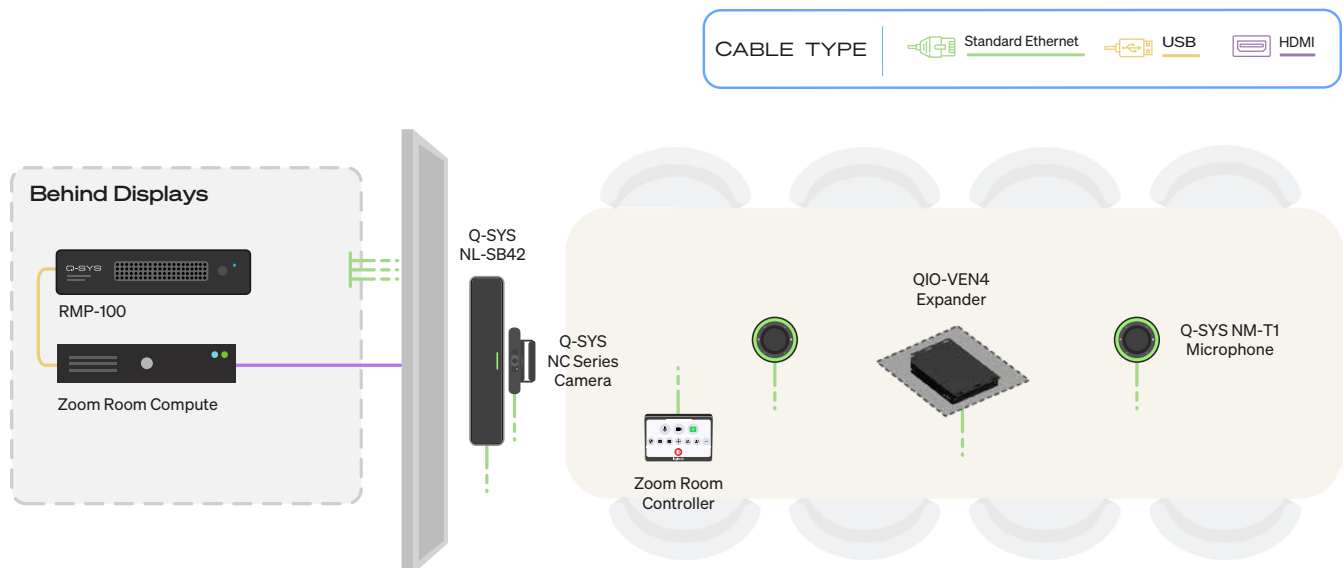

Q-SYS ROOMSUITE MODULAR SYSTEM

The Q-SYS RoomSuite Modular System's RMP-100 processor and QIO-VEN4 expander deliver an integrated hardware foundation for audio processing, networking, video distribution, AV bridging, and display control while supporting a scalable portfolio of Q-SYS networked collaboration peripherals to tailor each system to your room's specific needs.

- Q-SYS NC-90-G2 network ePTZ cameras use the power of the network, allowing you to use as many Q-SYS network conference cameras in the space to provide multiple points of view to frame the right shot.
- Q-SYS NL-C4 and NL-P4 are ideal for overhead loudspeaker placement for in-ceiling and open ceiling applications respectively. Both options integrate into your space with a single Ethernet cable to reduce overall hardware footprint and lower system cost.
- Q-SYS NL-SB42 is a network soundbar ideal for placement at the display for directional audio applications.
- Q-SYS NM-T1 network microphone offers advanced beamforming technology to ensure optimal clarity with onboard call controls, and touchless muting capability.
- Q-SYS Partner microphones, tested and Zoom-certified, enable flexible room configurations and capture speech from anywhere in the room.

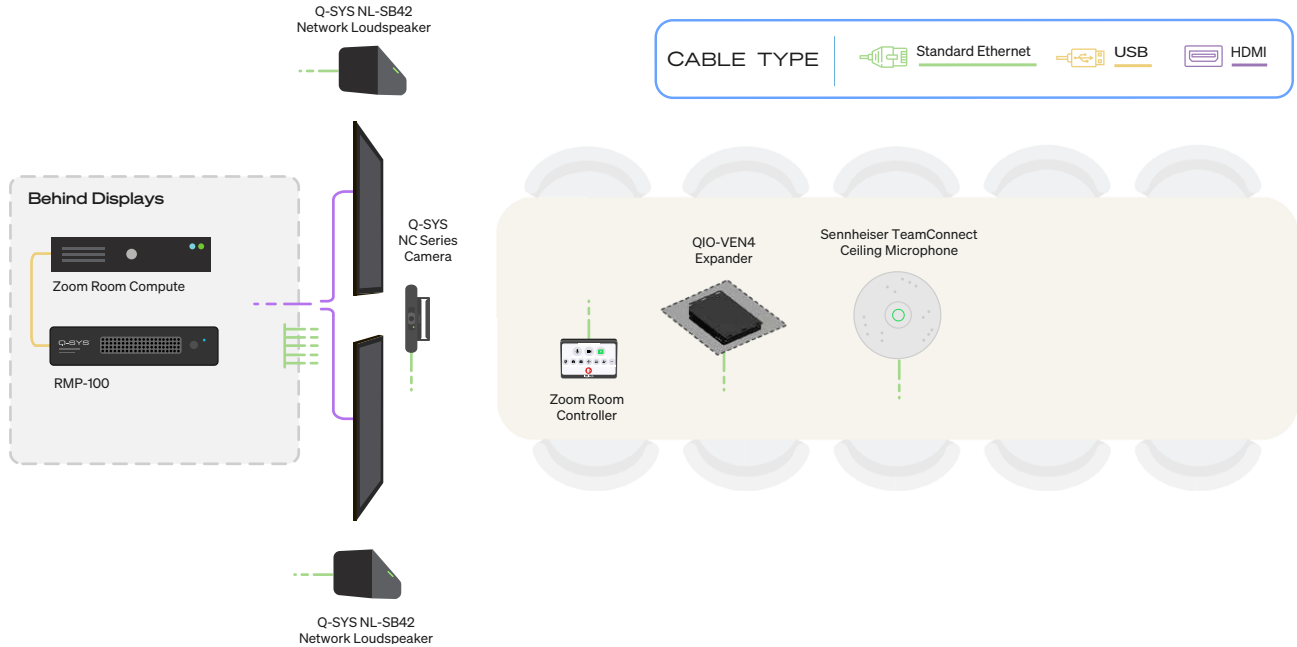

Table microphones and directional loudspeakers

Ability for far-end audio to come from the front of room to deliver a more realistic experience. Q-SYS NM-T1 network microphone offers advanced beamforming technology to ensure optimal clarity with onboard call controls, and touchless muting capability.

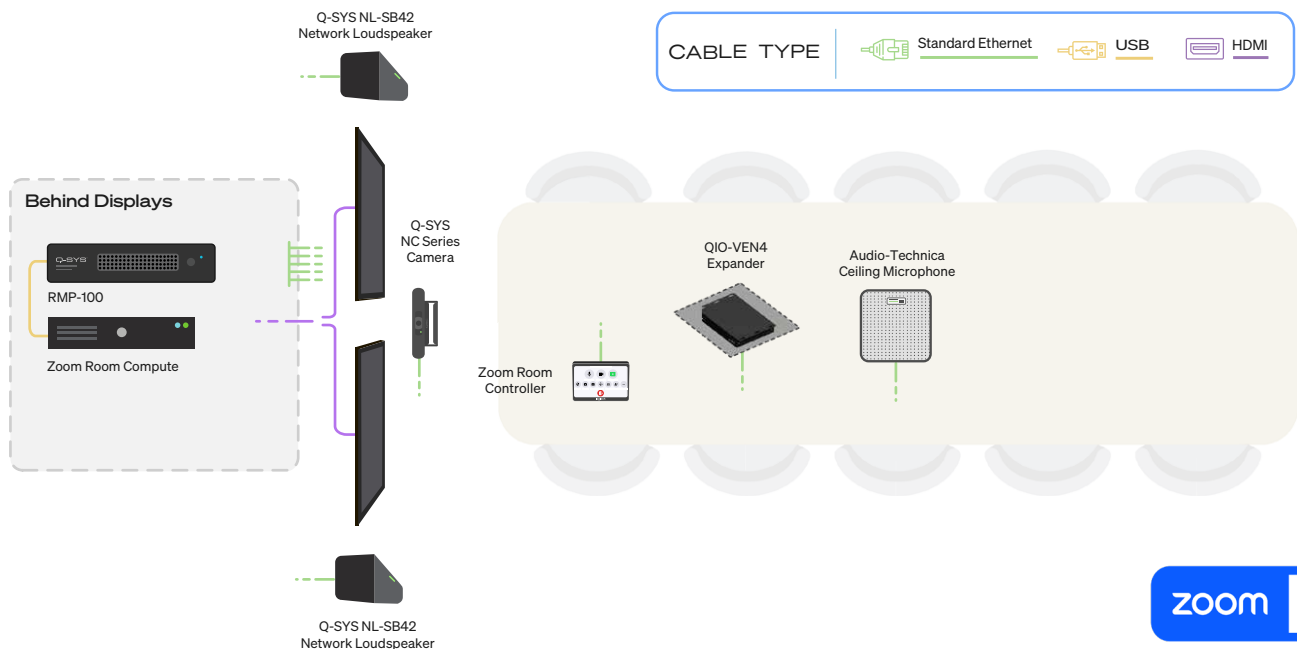

Ceiling microphone and directional loudspeakers

Ability for far-end audio to come from the front of room to deliver a more realistic experience. The Sennheiser TeamConnect Ceiling Medium microphone offers a seamless design option for superior audio integration and is ideal for mid-sized meeting, lecture, or collaboration spaces.

Ceiling microphone and directional loudspeakers

Ability for far-end audio to come from the front of room to deliver a more realistic experience. Audio-Technica ATND1061 ceiling array microphone uses beamforming technology to enable flexible room configuration and captures speech from anywhere in the room.

RoomSuite Modular System	Quantity	
RMP-100 with QIO-VEN4 expander	1	
Camera	Quantity	
Q-SYS NC-90-G2 network camera	1	
Microphone Options (Choose one configuration)	Quantity	
Q-SYS NM-T1 table network microphone	2	
Q-SYS Partner microphone*	1	
Loudspeaker Options (Choose one configuration)	Quantity	
Q-SYS NL-C4 ceiling network loudspeaker	2	
Q-SYS NL-P4 pendant network loudspeaker	2	
Q-SYS NL-SB42 network loudspeaker	1
